Gibrail Zaidi

Software Developer | LLM agents, MCP tools and AI data pipelines

Delhi NCR, India · gibrailzaidi@gmail.com · linkedin.com/in/gibrailzaidi · github.com/Gibrail404 · medium.com/@gibrailzaidi

SUMMARY

Software developer with 2+ years of experience in full-stack engineering and AI-powered product development. Experienced in building LLM agents, AI workflows and data pipelines. Built and deployed SafePay Command, an AI-powered payment-risk platform using machine learning and LLM-based workflows.

EXPERIENCE

Software Developer, Helium

India — Nov 2025 to Present

- Built an LLM generation pipeline (NestJS, Bull/Redis queues) running prompt configs (text, image, JSON, FAQ) over catalog resources, with versioned outputs so only stale or missing values regenerate.
- Extended a multi-agent platform (specialist agents that delegate work to each other) with an A/B testing agent, SEO and blog-publishing tools, and a human-in-the-loop tool that asks structured multiple-choice questions before ambiguous or irreversible actions.
- Built an MCP server so AI clients can create, preview and activate A/B experiments through a fixed action catalog, with confirmation for destructive actions.
- Developed a keyword research pipeline (LLM query expansion, DataForSEO) with scoring, streaming results, resumable runs and per-run cost tracking.

Software Developer, AdGlobal360 (Hakuhodo)

India (intern Sep to Nov 2024, full-time from Dec 2024) — Sep 2024 to Nov 2025

- Built lead-management platforms for automotive brands (qualification, stage tracking, assignment) with role-based access control, filters and dashboards.
- Delivered Next.js interfaces and secure NestJS and Node.js/Express APIs.

Full Stack Developer, ZWareSoft

Remote — Mar 2024 to Jun 2024

- Built a club-management platform (memberships, events, payments) with the MERN stack.

PROJECTS

SafePay Command: AI payment-risk platform

Python, FastAPI, LightGBM, PostgreSQL, Next.js — safepay-command.vercel.app · github.com/Gibrail404/safepay-command

- Built a payment decision engine: a LightGBM risk model scores each payment, customers get up to three questions when a payment looks risky, and versioned rules decide allow, warn, hold or block; the LLM never makes the final decision.
- Added LLM steps (questions, customer messages, case summaries) behind a gateway with PII redaction, Pydantic schema validation, fact-checking of every sentence, fallbacks and a daily cost cap.
- Built fuzzy sanctions-list name screening (OFAC, TF-IDF matching), an analyst case workflow with recorded overrides, and a tamper-evident hash-chained audit ledger.
- Evaluated on held-out data (0.812 average precision; 88% recall at a 1% false-alert budget), compared AI and graph features against simple baselines, and wrote 320 tests including PostgreSQL race conditions.
- **Face-Forward:** facial-recognition attendance system with anti-spoofing and secure check-in/out. Next.js, MongoDB Vector Search, TensorFlow.js. github.com/Gibrail404/face_forward
- **SmartLeads-AI CRM:** AI-powered CRM with Gemini lead scoring, analytics dashboard and CI/CD. github.com/Gibrail404/SmartLeads-AI_CRM

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, SQL
AI/ML: LLM agents, tool calling, structured outputs (Pydantic, Zod), guardrails, MCP, RAG (LangChain), model evaluation; LightGBM, scikit-learn; PyTorch
Backend and data: FastAPI, NestJS, Node.js/Express, REST APIs, Bull and Redis queues; PostgreSQL, MongoDB, MySQL
Frontend: React, Next.js, Tailwind CSS
Cloud and tools: AWS, Docker, Git/GitHub, Grafana, pytest, Playwright

EDUCATION AND AWARDS

B.Tech, Computer Science and Engineering (AI & ML), GNIOT, Greater Noida (Dr. A.P.J. Abdul Kalam Technical University), 2025.

Winner, AGL Hackathon 2025 (anti-spoofing check-in) · Winner, Smart India Hackathon 2023 · Best Project Award 2024, GNIOT.
